FOREWORD BY THE GOVERNOR

My dear Fellow Citizens:

Agriculture is Montana's first industry. From it the people of this State derive their greatest cash income.

Today, Montana stands at the threshold of its greatest development. The future, in my opinion, holds unlimited promise. Great dams are being constructed, which will provide additional irrigated land, and electric power will be generated so that new industry will be attracted to our State. Agriculture will continue to be our prime occupation, but our economy will become more diversified as time goes on.

One of the aids to the further development of Montana is the collection of statistical information. The Montana Department of Agriculture and the Bureau of Agricultural Economics of the United States Department of Agriculture have combined their efforts and have tabulated the material for this Montana Agricultural Bulletin. I believe that this Bulletin is a treasury of valuable information for everyone concerned with Montana and its productive capacity.

I am happy to add my word of commendation to those who are responsible for the preparation of this important study.

Cordially yours,

Governor.

PREFACE

The first issue of Montana Agricultural Statistics, prepared under a co-operative agreement between the Montana Department of Agriculture, Labor and Industry and the Bureau of Agricultural Economic, United States Department of Agriculture was published in December, 1946. Additional funds were contributed toward the project by the Montana Water Conservation Board and the Montana Chamber of Commerce. The second issue of Montana Agricultural Statistics is made available through continuation of the co-operative agreement and with funds appropriated by the thirtieth session of the Montana Legislature. Since the agricultural statistics program of the United States Department of Agriculture covers the preparation of information only on the "state" level, it would not be possible for the Montana B. A. E. office to compile the county information in this bulletin without contributions from a co-operating agency. Thus, through the co-operative agreements, much greater use is made of a wide variety of data collected by both the state and federal departments from producers, processors, dealers and shippers of agricultural products.

Many persons associated with the agricultural industry, have ready need for statistics contained in this bulletin. It serves as a reference and guide to: farmers and stockmen as a record of crop and livestock production for their counties, which assist them in planning their individual production programs; persons engaged in developing plans for future irrigation projects by providing county and state statistics relating to irrigated and non-irrigated lands; state and federal planning and development agencies in formulating their farm and ranch production programs; railroads as a basis for car distribution and orderly movement of crops and livestock to market; bankers and other loaning concerns in the determination of farm and ranch credit rates; all industries connected with agriculture, such as machinery manufacturers, fertilizer manufacturers, seed houses, etc., for determination of quantities to be manufactured, the location of manufacturing plants and methods of distributing their products. The use of agricultural statistics is far reaching.

CONTENTS OF BULLETIN[1]

This bulletin presents a series of state statistics for the years 1929 to 1947 and county statistics for the years 1946 and 1947. The December, 1946, issue contained a long-time historical series of state data ending with the year 1945 and county data for the years 1944 and 1945. Where state information prior to 1929 is desired, it will be necessary to refer to the December, 1946, issue. Some revisions of the state statistics have been made for recent years and in such cases the figures appearing in this bulletin supersede those in the first issue. This bulletin consists of the following:

I. **DIAGRAM**:

1. "Value of Production — 1947" shows the relative importance of Montana agriculture with its mineral and timber products.

II. CHARTS:

1. "Cash Receipts From the Sale of Principal Farm Products and Government Payments, 1929-1947" depicts the sharp increase in agriculture income of recent years. Cash values of agricultural products used on farms and ranches are not included in the figures used for this chart.
2. The "All Crops" chart illustrates the relative importance of irrigation in Montana. It will be noted that irrigation was particularly vital to the state's agriculture during the drought period of the thirties.
3. "Montana Annual and Growing Season Precipitation" shows the moisture pattern for the three divisions of the state. Note that the eastern division receives relatively more moisture during the critical growing period.

III. MAPS:

1. The four climate maps present long-time average characteristics of temperatures and precipitation over the state. Climatological information from two hundred observation stations was used in preparing these maps.

IV. TABLES:

State Statistics are presented with the following tables: 1. Total acreages planted, acreages harvested, yield per harvested acre, production, price, value of production and value of production per acre. 2. Irrigated and non-irrigated data on acres harvested, yield per harvested acre, production, value of production and value of production per acre. 3. Disposition of crop production, stocks, and value of sales. 4. Per cent of crops shipped each month. 5. Livestock and poultry inventory numbers, value per head and total value as of January 1 each year. 6. Production disposition and production value of livestock, poultry, livestock products, dairy products and poultry products.

County Tables show total crop acreages planted, irrigated and non-irrigated acreages harvested, production and value of production and livestock and poutry inventory numbers with values.

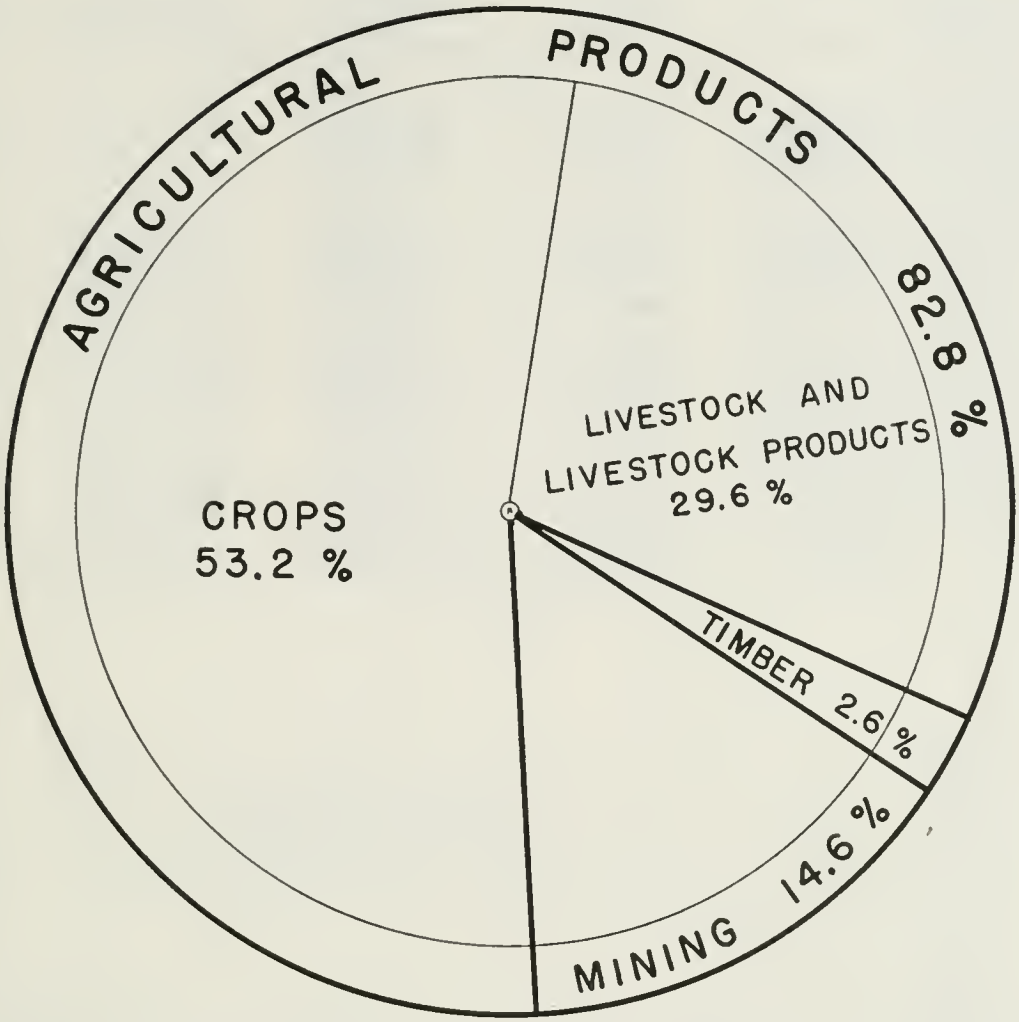
ACKNOWLEDGEMENT

Acknowledgement is due to several persons and agencies who have supplied material for this bulletin. R. A. Dightman, Weather Bureau, Helena, for climate data. T. A. McMaster, State Dairy Division, Helena, for a list of creameries and cheese manufacturing plants. Montana Railroad and Public Service Commission, for carlot shipment data. Montana Equalization Board, Helena, for value of mining products. United States Forest Service, Missoula, for value of timber products.

[1] — County statistics for 1946 and 1947 were prepared and assembled by Michael T. Solan, Grace M. Cross, Joseph M. Sales, Jr., and P. J. Creer. Other employees in the office of the Agricultural Statistician assisted with the copy work of data printed.

P. J. CREER,
Agricultural Statistician.

VALUE OF PRODUCTION 1947



The value of agricultural production in the Treasure State, as indicated by the above diagram, is a large portion of the total value of goods produced and taken from the good earth. Montana ranks as a prominent mining state and also produces considerable timber, but agriculture is by far her leading industry. Although prices received for agricultural products rose sharply from 1941 to 1947, the volume of agricultural production also increased during the six-year period. Cropped acreages in 1947 amounted to 8,480,900 acres, compared with 6,740,000 acres in 1941, a gain of 26 per cent.

VALUE OF PRODUCTION, 1947 — BY GROUPS

Crops	$274,872,000
Livestock and livestock products*	152,718,000
Timber†	13,200,000
Mining‡	75,490,000
Total	$516,280,000

* — Not to be confused with cash receipts from sales of livestock and livestock products as shown elsewhere in this bulletin. Value of production may differ from cash receipts due to the change in livestock inventories at beginning and end of year.

† — Value of all timber products as reported by Division of Forest Economics, United States Forest Service, Missoula, Montana.

‡ — Recovered value. Includes: Coal, $6,680,000; metals, $45,446,000; oil, $16,120,000; gas, $1,627,000; miscellaneous, $5,617,000. Reported by Montana Board of Equalization.

[1] — Computed from the value of milk, cream and farm butter sold divided by the quantity of milk or butterfat used in the preparation of these products for market.

[2] — Milk and milk equivalent of cream and farm butter consumed, valued at the average returns for milk utilized in dairy products sold.

[3] — Value of combined sales plus value of products consumed in the farm household.

CREAMERIES and CHEESE MANUFACTURING PLANTS IN MONTANA[1], 1948

TOWN	PLANT NAME	PRODUCTS*	OPERATORS
Absarokee	Absarokee Creamery	B	H. P. Scovill
Anaconda	Purity Dairy	B IC	William Ash

Footnotes for county tables, pages 48 to 103:

* — Equivalent bushels produced from acreage harvested for all purposes.

† — Sugar beet values include price support payments, which are covered in "Government Payments," first table of this bulletin. See page 32 for approximate amount per ton.

‡ — Alfalfa hay and wild hay values are included in all hay values.

Precipitation and Length of Growing Season for Selected Stations — Table 11

STATE STATISTICS

Grain Crops

Barley 20, 21
Corn 16, 17
Oats 18, 19
Rye 24
Wheat, All 12, 13
Wheat, Spring 15
Wheat, Winter 14

Hay and Forage Crops

Alfalfa 30
All Hay 28, 29
Sorghums 32
Wild Hay 31

Other Crops

Beans, Dry 26
Flaxseed 22, 23
Peas, Dry 27
Potatoes 25
Seed, Alfalfa 33
Seed, Crested Wheat Grass 34
Seed, Mustard 35
Seed, Sweet Clover 34
Sugar Beets 32

Fruits

Apples 36
Cherries 36

Livestock

Cattle, Total 38
Milk Cows 38
Hogs 40
Horses 37
Mules 37
Sheep and Lambs 39

Livestock Products

Milk Production 42
Dairy Products From Farms 42, 43
Creameries and Cheese Plants 44, 45
Dairy Products Manufactured In Montana 45
Wool Production 39

Poultry and Poultry Products

Chickens 41
Eggs 41
Turkeys 41

COUNTY STATISTICS

County Ratings, Crop Acreage and Production 46, 47
